

Deploying AI? You need Netwrix.

GenAI tools can supercharge productivity, but without guardrails they will surface sensitive data to the wrong audience.

Most cybersecurity tools protect either data or identity, creating governance gaps. You can't protect data without also securing the identities that access it.

Netwrix connects data and identity so you can deploy AI safely.

The Netwrix platform helps you fulfill requirements for compliance, IT and security projects across a range of common use cases.

Netwrix capabilities

AI Governance

- Discover sensitive data before copilots and agents can surface it
- Reduce overexposed access and enforce least privilege for AI use cases
- Detect and block sensitive data leaks in prompts, apps and endpoints

Data Access Governance

- Map where sensitive data lives and who can access it from end-to-end
- Automate risk-based access reviews and least-privilege remediation
- Detect abnormal access and accelerate incident response and recovery

Data Security Posture Management

- Prioritise compliance risk and run repeatable data risk assessments
- Find overexposure and remediate risky data across hybrid stores at scale
- Monitor access activity to spot threats, support audits and prove controls

Endpoint Data Loss Prevention

- Block sensitive data in AI tools, browsers, apps and copilots in real time
- Stop exfiltration via USB, devices, print and other endpoint paths
- Enforce consistent policies across Windows, macOS, Linux and offline

Data Discovery and Classification

- Discover and classify sensitive, shadow and stale data everywhere
- Assess exposure, fix risk and simplify audit readiness and reporting
- Gain visibility into access, activity and threats across data stores

Identity Threat Detection and Response

- Detect identity attacks like kerberoasting and password spraying early
- Stop ransomware and insider threats with rapid detection and response
- Contain non-human identity misuse and protect Tier 0 groups from changes

Identity Security Posture Management

- Continuously scan AD and Entra ID for misconfigurations and risky drift
- Visualise exploitable paths and follow guided remediation steps quickly
- Track posture over time with alerts, trends and compliance-ready reports

Identity Governance and Administration

- Automate joiner-mover-leaver workflows so access matches policy
- Manage groups and entitlements centrally to curb access sprawl and risk
- Certify access and flag SoD/dormant account risks before they escalate

Privileged Access Management

- Replace standing accounts with just-in-time, time-limited access securely
- Record privileged sessions and generate audit trails for every action
- Remove hidden excess rights and enable safe emergency access when needed

Directory Security

- Assess AD risks mapped to MITRE ATT&CK and prioritise remediation actions
- Capture directory changes and automate joiner-mover-leaver workflows
- Restore objects or recover forests to ensure continuity after attacks

About Netwrix

The Netwrix vision is to create a world where every organisation has secured its data and identities. The 1Secure™ platform unifies identity and data security to provide complete visibility into where data lives, who can access it and how it's governed.

With Netwrix, security teams strengthen data protection, safeguard identities and stay ahead of evolving threats. Today, more than 13,000 customers, including nearly 25% of the Fortune 500, rely on Netwrix solutions across hybrid and AI-driven environments.
